
Database debugger not functioning

Posted by tom123 - 2009/11/13 05:15

Hello all,

I am trying to use this component, but when content wasn't being published and categories weren't being transferred, i tried checking out my connection, and found that the database debugger was entirely disfunctional. Even when i put bogus settings like:

nui9nob[;pnhu

nui9bn i[

nui9bn o9b

it still reports a successful connection. The ftp debugger works fine, but the database debugger doesn't. Also, when i try to send categories and articles, it always reports success, but never works. All necessary permissions have been granted. query.txt and wrapperMYSQL.php have been transferred. missing "PHP" fix applied. none of it helped.

I know these problems just seem to get worse and worse, but i really need help with this component.

Best regards,

Tom
