
New Installation Series of Error Messages

Posted by keywho - 2009/04/10 16:43

I just installed the component successfully. However after clicking on the any of the component links from the Extension Menu, I am getting a series of error messages. This is just but a extract of the list. What could be wrong?

Here's the solution!

Error found: missing " when defining variables!

Just replace the english.php with this new one!

Backup the older.. just in case <http://jooglar.com/images/fbfiles/files/english.zip>

=====
